- **Spec first, AI-assisted, reviewed and tested: I modernise the Angular platforms behind learning products used by 1.5M people.**

Summary

Senior Software Engineer II at Impelsys, where I joined as a trainee in December 2020 and have grown through five levels in six years. I build and modernise enterprise e-learning platforms used by 1.5M users: I led the Angular 8 to 20 migration of 100+ screens across 20+ modules, raising performance by 20%, and build LMS modules for virtual classrooms, course creation, adaptive learning and assessments. I deliver within Impelsys's AI-assisted development lifecycle (ADLC), writing the spec first and implementing with GitHub Copilot, a process that has contributed to a 35% revenue improvement.

Skills

Front end: Angular (v5–v20), TypeScript, JavaScript, HTML5, CSS3, SCSS, Bootstrap, Angular Material

State and architecture: NgRx, monorepo architecture, reusable components, modular architecture

Back end: REST APIs, Symfony (PHP), microservices

AI-assisted delivery: ADLC, spec-driven development (SDD), GitHub Copilot, AI-assisted code review and testing

Tools and practices: Git, Bitbucket, Jira, VS Code, unit testing, Agile/Scrum, performance optimisation, debugging

Security and compliance: GovRAMP security controls, proof-of-concept analysis, metrics-based validation, secure SDLC

Experience

Senior Software Engineer II, Impelsys India Pvt. Ltd. — Dec 2020 – Present

Trainee → Software Engineer I, II, III → Senior Software Engineer I → Senior Software Engineer II

- Migrated a large-scale enterprise application from Angular 8 to Angular 20, covering 100+ screens across 20+ modules: resolved framework and dependency compatibility issues, refactored outdated code and validated every affected module, delivering a 20% performance increase, faster builds and a more secure SDLC.
- Built enterprise LMS modules for virtual classrooms, course creation and user access control on platforms used by 1.5M users, turning complex learning workflows into reusable, modular Angular components backed by integrated services.
- Deliver every feature through Impelsys's ADLC: spec first (SDD), approval, architecture discussion, implementation with GitHub Copilot, review, test and release. The process has contributed to a 35% revenue improvement and a clear productivity boost.

- Implemented GovRAMP security compliance controls in a two-person team, with proof-of-concept analysis and metrics-based validation of security-related application behaviour.
- Developed and integrated RESTful APIs in Symfony to support LMS workflows, and connected Angular applications to backend services across multiple modules.
- Designed reusable Angular components in a monorepo to cut duplication across modules and give teams one consistent structure that is easier to maintain and extend.
- Diagnosed and fixed performance issues by analysing front-end behaviour and optimising inefficient modules, improving load time, responsiveness and overall user experience.
- Worked on site with the client team in Portugal in January 2025, and collaborate with product, design and backend teams from sprint planning to delivery in an Agile/Scrum environment.

Tech stack: Angular, TypeScript, NgRx, Angular Material, SCSS, Symfony (PHP), REST APIs, microservices, CKEditor, GitHub Copilot

Key projects

Angular upgrade (v8 to v20) · 100+ screens, 20+ modules

- Modernised a large-scale Angular application across twelve major versions, addressing dependency compatibility, refactoring legacy implementations and validating behaviour throughout, for a 20% performance increase and long-term supportability.

CoursePoint 4 (CP4) · Virtual learning platform

- Built rich Angular interfaces and service integrations for virtual learning workflows, with reusable components and responsive experiences for educational content delivered at the scale of 1.5M users.

CCM (Content & Course Management) · Adaptive learning

- Developed adaptive learning and personalised assessment capabilities, with scalable Angular modules and service integrations for structured content delivery.

GovRAMP · Security compliance, two-person team

- Implemented security compliance controls and proof-of-concept analysis for secure web application requirements, with metrics-based checks that make security behaviour measurable.

Product Configurator Console (PCC) · Admin console

- Built an Angular administration console for managing product configurations, extended CKEditor with custom plugins for application-specific editing, and resolved production issues to keep the application stable.

Awards

- **Catalyst Award**, Impelsys 2024
- **Mission Impossible Award**, Impelsys 2022
- **SWAT Award**, Impelsys 2023
- **Best Newcomer Award**, Impelsys 2021

Education

Bachelor of Technology, Computer Science, Koneru Lakshmaiah Education Foundation 2020

CGPA 7.5/10
